

FOR OTHER TEAM 2 FAMILIES

Set Up Your Own Expedition Tracker

A free app for following your child's Vietnam & Cambodia trip day-by-day — built around the official True Adventure itinerary, with a route map, countdown, trek progress, and a private family message board.

■ **Worth doing before Thursday. The team departs Friday 17 July, with the pre-departure meeting on Thursday 16 July — set this up now and you'll have the countdown, flight tracking and full itinerary ready before anyone leaves.**

What you'll end up with

An app icon on your phone and your family's home screens showing exactly where your child is each day of the trip, a live countdown to departure and homecoming, the full day-by-day itinerary, key contacts, and a private space to leave messages for them to read when they're back. Takes about 5–10 minutes to set up, no technical experience needed — you're copying a working app, not building one.

What you'll need

- A free GitHub account (github.com) — just an email and password

Step 1 — Create a free GitHub account

Go to github.com and sign up with any email address. Verify your email when prompted.

Step 2 — Copy (“fork”) the tracker

Go to github.com/duncanwebb/expedition-tracker and click **Fork** (top right). This makes your own private copy of the app in one click — no files to download or upload.

- 1 On the “Create a new fork” screen, you can leave everything as default
- 2 Click Create fork

Step 3 — Turn on GitHub Pages

- 1 In your new copy of the repository, click Settings → Pages (left sidebar)
- 2 Under “Build and deployment”, set Source to Deploy from a branch, Branch to main, folder / (root), then Save
- 3 Wait a minute or two, refresh the page, and you'll see a green box with your live web address (something like yourname.github.io/expedition-tracker)

Step 4 — Personalise it for your child

Open your new web address in Safari. Tap the Info tab, then the “Whose trip is this?” card, then “Change name / pronouns”. Enter your child's name and pronouns and save — the whole app updates itself everywhere: the countdown, the itinerary, the map and the messages board.

No code editing needed — this is a one-time toggle already built into the app.

Step 5 — Add it to your home screen

In Safari, tap the Share button, scroll down and tap “Add to Home Screen”. Do this on every family member's phone and iPad who wants it — each device shows its own private messages, so everyone gets their own message log to build up while your child is away.

This must be done in Safari specifically, not Chrome or another browser, for “Add to Home Screen” to work correctly on iPhone/iPad.

A couple of things to know

- The live trek tracker and flight times come from True Adventure's own systems — this app just makes them easier to check at a glance. Always defer to True Adventure or the school for anything that looks different.
- No phone signal is expected during the jungle trek days — the satellite tracker keeps updating even then (just not instantly), and gaps of a few hours after landing or overnight are normal, not a fault.

Questions or stuck on a step? Reach out to Duncan Webb — happy to help. Built from the official George Abbot School Team 2 True Adventure itinerary; always defer to True Adventure or the school for any live changes to plans.
